Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.ut. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                               Drosophila melanogaster genome survey sequence SP6 end of BAC BACNOSCO7 of DrosBAC library from Drosophila melanogaster (fruit ALI), genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

RESULT 1

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention mas cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer. ds; human; monocyte-chemoattractant-protein-1; MCP-1; cytostatic; antiarteriosclerotic; gene therapy; atherosclerosis; cancer; cervical carcinoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, cytokine; JE; immune responsiveness; wound healing; tissue repair; bacterial infection; viral infection; anaemia; B cell deficiency; T cell deficiency; vulnerary; antibacterial; virucide; gene; ss.
are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nuclectide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antiSense base of RNA. The purified polypeptide is useful for generating antiSense base of the Tr. The present sequence is useful for generating antiDodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence. Language and the province of the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  198

The invention relates to a new combination which comprises cDNAs or their complements not given in the specification that are differentially expressed in vascular endothelium. The combination of cDNAs is useful for preparing a composition for diagnosing or treating vascular disorder, comprising atherosclerosis, haemangioma, haemangioendothelioma, oedema, diabetic retinopathy, warts, pyogenic granulomas, Kaposi's sarcoma, scar keloids, pallergic oedema, neoplasms, psoriasis, ulcers, follicular cysts, endometriosis, periconeal sclerosis or obesity. The present sequence represents a cDNA differentially expressed in the vascular endothelium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TIGATGTTTTAAGTTTATCTTTCATGGTACTAGTGTTTTTTAGATACAGAGACTTGGGGA 180
                                                                                                                                                                                  New combination comprising cDNAs that are differentially expressed in vascular endothelium, useful for preparing a composition for diagnosing or treating vascular disorder, e.g., atherosclerosis, psoriasis, ulcers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; 88; differential expression; foam cell; LPS; lipopolysaccharide; cardiovascular disease; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AATTTTGTTTGTTTGATGTGAAACATTATGCCTTAAGTAATGTTAATTCTTATTAAGTTA

                                                                                                                                                                                                                                                                New isolated human JE cytokine DNA and polypeptide, useful for treating bacterial and viral infections, anemia, or B cell or T cell deficiencies, or in wound healing and related tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a nucleic acid sequence encoding human cytokine, JE. JE sequence is useful in pharmaceutical preparations for stimulating and/or enhancing immune responsiveness, wound healing and related tissue repair. It is also useful for treating bacterial and viral infections, anaemia or B/T cell deficiencies. The present sequence is human JE cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      recaectaactratririceceraectriceceaeacacerterririatratrataare 457

The invention relates to a combination comprising several polynucleotides chaving any one of 127 sequences (S1) such as the sequence of human CC chaving any one of 127 sequences (S1) such as the sequence of human calmodulin gene, human mRNA for KIAA0930 protein, leukotriene AA calmodulin gene, human mRNA for KIAA0930 protein, leukotriene AA calmodulin gene, human CGI-142 protein mRNA, human KF channel beat 2 subunit by culture and a library of mucleic acid obtaining an expression vector containing the moleic acids, a host cell cortaining the vector, a purified polypeptide appearing as ADE2750 and containing the vector, a purified polypeptide appearing as ADE2750 and ADE2571, producing a protein by culturing the host cell, and a ADE2751, producing a protein by culturing the nost cell, and a ADE2751, producing a protein by culturing the operation of increased nucleic acids are useful for comparison of differential expression of one or more throughput detection of differential expression of one or more throughput detection of differential expression of one or more throughput screening of allibrary of molecules or compounds to comparison with a standard defines early, mid or late atherosclerosis and comparison with a standard defines early, in throughput screening of allibrary of molecules or compounds to identify a ligand which binds a polynucleotide. The library of molecules or compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand from a sample for making a antibody. The protein form a making a making cardiovascular disorder. The foam cell-expressed nucleic acids are useful cardiovascular disorder. The foam cell-expressed nucleic acids are useful cardiovascular disorder. The foam cell-expressed nucleic acids are useful cardiovascular disorder. The presen
                                                                Combination containing several polymucleotide that are differentially expressed in foam cells and complements of the polymucleotides, useful for diagnosing cardiovascular disease or atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1472 BP; 462 A; 303 C; 268 G; 439 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular CC12-deficient, Ccr2-deficient and/ or a Cc12-deficient (Ccr2-deficient dual Micokout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipotuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and accordingly, such compositions exhibit ophthalmological activities and the human CC12 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                          Testing candidate drug for treating age-related macular degeneration, by administering drug to Col2-deficient, Cor2-deficient knockout mouse, and analyzing development or regression of drusen and/or lipofuscin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 AATTTTGTTTGTTGATGTGAAACATTATGCCTTAAGTAATGTTAATTCTTAAGTTA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                        The present invention describes an isolated polynucleotide (PN) comprising: (a) a sequence comprising at least 15 contiguous nucleotides of a sequence comprising at least 15 contiguous nucleotides of a sequence comprising the requences (A) from Table 4 given in the specification; or (b) a sequence that is complementary to (A). Also described: (1) an array of (PN)s comprising two or more of the isolated (PN)s; (2) detecting a (PN) in an individual; (3) a computer-readable storage medium, where each record has a field identifying a base occupying a (PN) site and a location of the polymorphic site; and (4) a signal carrying data for access by an application program having executed on a data processing system. The '(PN) can be used for detecting loci associated with multiple sclerosis, ACF64025 to ACF64424 represent

The invention relates to single nucleotide polymorphisms in the gene encoding human small inducible cytokine A2 (SCYA2) polypeptide. A method for haplotyping the SCYA2 gene in an individual comprises identifying the modelide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the SCYA2 haplotypes given in the specification or whether both copies are defined by applotype pair. Copies are defined by a haplotype pair of the SCYA2 applotype pairs can be assigned to specific genotypes. An association between a contain and a haplotype or haplotype pair of the SCYA2 gene can be cidentified by comparing the frequency of the haplotype or haplotype pair of the SCYA2 agene can be contained to a reference population, where a higher haplotype containty pair in a reference population, where a higher haplotype containty pair. SCYA2 and its corresponding DNA are used for studying the expression and function of SCYA2, and in screening for candidate drugs to treat diseases related to SCYA2 and in screening for thuman SCYA2 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2226 TIGATGTTITAAGTTTATCTTTCATGGTACTAGTGTTTTTTTAGATACAGAGACTTGGGGA 2285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New genetic variants having polymorphisms in the small inducible cytokine Al (SCYA2) gene, useful for studying the function of SCYA2, and for treating disorders affected by expression or function of the SCYA2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix. notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AATTTTGTTTGTTGAAACATTATGCCTTAAGTAATGTTAATTCTTATTTAAGTTA

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      48

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular e.g. cardiovascular disease, hypertension, cardiac arrhythmias and form and proposing disease, note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 168

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TIGAIGITITAAGTITATCTITCATGGTACTAGTGTTTTTAGATACAGAGACTTGGGGA 180

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver. comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed sepecification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AATTTTGTTTGTTGATGTGAAACATTATGCCTTAAGTAATGTTAATTCTTATTAAGTTA 120

modified polylinker; Site_1: ECOR I; Site_2: Not I; UI-E-CLI is a normalized CDNA library confaining the UI-E-CLI is a normalized CDNA library confaining the following tissue(s): retina. The library was constructed following tissue(s): retina and Soares, Genome Research, according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed eight a nolisgo-dT primer containing a Not I site. Double with an olisgo-dT primer containing a Not I site. Double with Not I, and cloned directionally into pT713-Pac with Not I, and cloned directionally into pT713-Pac vector. The oligonacleotide used to prime the synthesis of vector. The oligonacleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The located for the program, Gene Discovery in the Visual System, supported by National Bye Institute (NEI).

/note="Organ: colon" Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_CO10 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 114484-1145351).
Subtraction by Bento Soares and M. Fatima Bonaldo. "
